

WANNA HOOK UP?

A powerful yet simple wifi booster solution

5milewifi is a new product designed to bring in those hard to reach wifi signals. It offers an unbeatable combination of pure power (1000mW) and a simple USB plug and go installation

Getting a WIFI signal when you are constantly on the move is a serious challenge. Cruisers, trucks and RVs that live "on the road and off the grid" need reliable access to WIFI. For those living on the road, WIFI is not just a convenience; it is a lifeline of communication that enables email, phone and internet. Imagine sailing into a new harbor and getting WIFI on board. Catch up on email, make a few Skype calls, research restaurants and use Google Earth to look over the area.

Why 5milewifi?

- 1) **The most powerful bi-directional solution** — 1000mW
- 2) **Simple 10 minute installation** — plug it into two USB ports
- 3) **Powerful Omni Antenna** with 25 feet of low loss cable
- 4) **Rugged, military grade aluminum construction** secluded spots on your boat or RV
- 5) **Designed and tuned to capture and hold distant hotspots**
- 6) **No complicated software** — uses Windows (XP, Vista, 98) wifi software
- 7) **Avoid the crowds and stay connected** — browse the web from secluded spots on your boat or RV

The average laptop's internal wifi card has a transmit power of about 30 milliamps.

That's fine if you are sitting in an internet café or a Starbucks. But if you want to connect from a distance, the most important ingredient is power. Pure power. 5mileWiFi offers 1000 milliamps. One full watt of transmitting and receiving power. That means that when you hit the enter key, your signal will have the punch to reach the hotspot and return to your computer. Wifi cards are radios. Imagine a VHF radio, at low power you cannot send or receive voice at much of a distance. Increasing the power increases the range. It's that simple.

Your mileage WILL vary.

Does 5milewifi guarantee you a 5 mile range for your connection? Of course not, given that no two wifi locations are the same. What we guarantee is PURE POWER. Where you would see 3 or 4 weak hotspots to choose from, 5mileWiFi will offer 15 or 20 with a strong signal. Our customers have connected to wifi from over 10 miles. When connected you will stay connected more reliably and at higher speeds.
